What a loss it would be for XM Satellite radio subscribers to not be able to hear a traffic and weather report that is fully superior to what "regular" radio has to offer. It should be obvious that XM subscribers are willing to pay a premium for quality that the "regular" radio simply can't muster, and the only way "regular" radio thinks to deal with the lost listener base is to try to diminish what XM can offer.

Here's a thought for the "regular" radio guys....

You've already lost listeners to XM, do you really think that they'll come back if they can't get traffic and weather except on your stations? (I mean after all, what better way to deal with a traffic jam than to tune into your favorite XM channel?) Instead of dragging down satellite radio, maybe you could devote your energies to making your programming more appealing. You know, less commercials, better content, more accurate traffic and weather, things like that.

I'm happily paying for XM Satellite Radio, so why shouldn't I get to hear an accurate traffic and weather report?
